Bulletin No.: 09202023
Date: September 20, 2023
Subject: New Brine Valve Assembly

We are excited to announce an updated design to our brine valve assembly that will impact all residential EcoWater conditioners, refiners, and service parts. The new brine valve part number **7380956** is backwards compatible, making it a direct replacement for all 7310210 brine valves currently in the field. The new design fits into the same brine well and uses the same brine line, allowing it to connect to the aspirator the same way as the old. The new valve is a welded design eliminating the clips and O-rings which can fail over time. The one-piece self-cleaning valve eliminates the need to disassemble the brine valve to clean. Products will begin shipping with the new brine valve in the next few weeks. Commercial softeners and compact softeners are not impacted by this update.
