

Product Bulletin

Bulletin No.: 032723
Date: March 27, 2023
Subject: New High Recovery Flow Restrictor for the 385 ROs

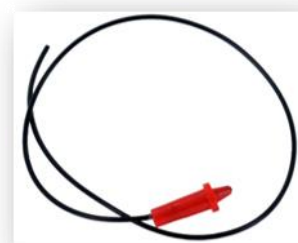

Your Water. Perfected.

Introduced at the Dealer Convention, the **New High Recovery Flow Restrictor** is now in production. This new restrictor uses a capillary tube design to provide back pressure through the length of the tube. The primary benefits include:

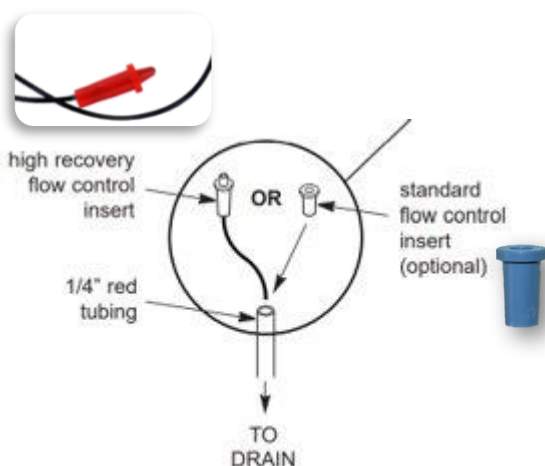

- Better Life and Durability
- Less Likely to Plug
- Fewer Connections
- Simplifies the Required Installed Restrictors from Two to One

We are no longer using the “inline” style restrictor. The new red capillary restrictor will replace the standard recovery blue version in the same drain line location when high recovery is desired. Both the standard recovery blue and high recovery red capillary restrictors will ship with each model 385 RO.

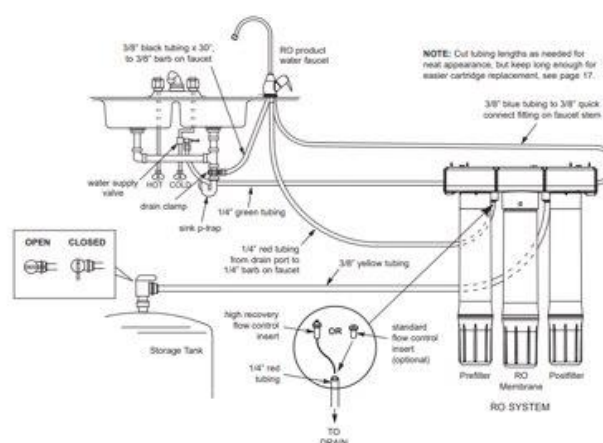

New: Capillary Style High Recovery Restrictor
P/N 7395634

Obsoleted: Old Style Inline High Recovery Restrictor

Thank You!
